

Bring your data, gain actionable insights

$2+3=5$

$2+2=4$

AnalyticVue transforms complex data into simple (secure, role based, easy-to-access, easy to understand) graphical and tabular views. It facilitates meaningful conversations to fuel higher value analysis and encourages actions leading to greater individual and institutional performance. AnalyticVue delivers data and analytics-as-a-service without having to invest valuable resources towards psychometrics, statistics, or an expensive information technology infrastructure.

ESSA Reporting and actionable insights at your finger tips, drives continuous improvement with AnalyticVue.

Why AnalyticVue

Inform Decision-Making

By simplifying the collection of data from various sources, AnalyticVue helps identify and validate patterns within and across institutions. AnalyticVue provides valuable insights that will support informed decision-making ranging from organization-wide policies to student-specific learning plans.

Gain Deeper Insights

AnalyticVue helps decision-makers to optimize associated processes and allocate critical resources to increase success rates, while reducing dropouts.

Support Personalized Learning

Easy to access and understand analytics assists teachers as they develop curriculum mapping and learning interventions while predicting performance and determining competencies that help personalize student learning.

Drive Student Success

AnalyticVue provides greater insights into student progress, runs predictive analysis to identify high-risk students, and provides multi-tiered, personalized insights that are required for effective MTSS.

Features

Data Visualizer

AnalyticVue has a built-in Data Visualizer framework for representation of data through the latest state-of-the-art reporting mechanisms that help to dynamically create reports.

Dashboard Management

Create and share your own dashboards. Using Dashboard designer not only helps add/customize/download any kind of dashlets but also can rearrange them into a dashboard that best serves your vision and needs.

Dynamic Templates

Users can use or customize existing templates, or create their own by defining the required fields for capturing the data into the application. In the process of a field's configuration, users can also set properties such as data types, lengths and business rules for data cleansing during data imports.

Business Rules Configurator

AnalyticVue has a built-in business rule engine to register, define, classify, manage, and, if needed, customize the rules based on your data and business needs.

Query Builder

Create and manage your own datasets within or across domains by using built-in functions and filters.

Using Data Visualizer, you can generate and share reports using these datasets for further analysis.

Student Path Prediction

The Advanced Analytics component of AnalyticVue efficiently uses Machine Learning (ML) and Artificial Intelligence (AI) to empowers organizations to unlock the insights within their historical data.
